Food and Agriculture Organization of the United Nations

Regional Training Courses for Phytosanitary Inspection on Seed-transmitted Diseases

Concept note

Background

Many countries have controlled the importation of non-occurring plant pests due to the risk of the invasion and spread, while the knowledge and detection skills on such pests are necessary to implement the warning investigation of the invasion.

The FAO regional project “Improving Capacities of Phytosanitary Inspection and Integrated Measures for International Movement of Seeds” (GCP/RAS/297/JPN) have the opportunity to learn the inspection knowledge and skills of pests which have not been occurred in a country but occurred in another countries.

As one of the activities, some National Plant Protection Organization (NPPO) officials and plant pathologists of Thailand and Viet Nam visited Japanese NPPO and other institutes to the purpose last year.

This time, two training courses have planned in Viet Nam for three seed-transmitted diseases matched with planned national training in Viet Nam and requests from Thailand.

Objectives

1. To improve inspection knowledge and skills for seed-transmitted diseases
2. To strengthen partnership between NPPOs of Viet Nam and Thailand

Expected outputs

1. Improving and retaining the same level of laboratory testing skills among inspectors of the NPPO of Viet Nam
2. Improving knowledge and skills for non-occurring plant diseases including quarantine pests of Thailand by inspectors and/or plant pathologists in Thailand

Financial support

The project will support all expenses for the training courses.

Date

1) 16 to 20 December 2019 on *Tobacco ring spot virus* (TRSV)
2) 13 to 17 January 2020 on *Pseudomonas syringae* pv. *tomato* and *Xanthomonas vesicatoria*

Food and Agriculture Organization of the United Nations

Venue

1. Post-Entry Plant Quarantine Centre No.I, Department of Plant Protection, Ministry of Agriculture and Rural Development, Hanoi, Viet Nam
2. Vegetable growing field in Hung Yen province (100 km from central Hanoi) and Hai Duong province (150 km from central Hanoi)

Participating countries: Thailand and Viet Nam

Expected participants

10 participants (3 from Thailand and 7 from Viet Nam)

Participants should be those who are engaged in plant quarantine inspection on seeds for planting or the related research with enough knowledge and skills of field inspection and/or laboratory tests including serological diagnosis and genetic methods.
